

Equine Reproduction Equine Embryo Recovery ***Equine Embryo Transfer***

Solutions Provided For All Your Breeding Needs

Equine Reproduction Svc (ERS) is based in north Texas and provides its services anywhere & anytime for most all the continental US. Please call for specific information and requests.

ERS performs many valuable functions for the horse industry with our "Mobile Embryo Recovery Transfer Service" being one of the most sought after.

With 40 years reproduction experience we will travel to your facility and work with you on retrieving embryos out of your mares or all other reproduction concerns with your breeding program.

We understand what you as a mare owner and breeder are trying to accomplish, we have similar aspirations and goals.

Coverage Area

North & Central Texas and Southern Oklahoma is our home operating area. With service to the rest of the United States also available. Basically anywhere anytime. Within an approximate three hour (180 miles) driving radius of Weatherford, TX – ERS provides ET services without a farm call (no trip fee). If the embryo will be going to the Weatherford area, we will furnish all materials needed to transport and deliver to one of our receiving centers or any other facility of your choice. YES - Recipient mares are available.

Benefits

You are going to be paying for a flush fee if you haul your mare to almost any facility for embryo flushing & transfer regardless. If you figure that into the equation ERS's services become extremely cost effective. Your mares, truck & trailer and you or your help get to stay home, conveniently saving time, allowing you to accomplish other tasks, saving wear and tear on equipment, and alleviating possible injury to either mares or foals. You can't haul your mare for what we can come to you and perform the process for.

A good number of "older mares" do not do real well being moved around. Their being able to stay home increases the chance that they could conceive.

Have your own recipient mares?

If you have the ability to acquire and manage your own recipient mares. We can perform the embryo transfer following the recovery "on site" for no additional fee.

ERS is the longest, continually in existence Equine Embryo Transfer Company in the United States

It is critical who performs this work and "experience does matter."

Consultation: Anywhere—Anytime

- Mare infertility
- Reproductive events
- Breeding farm setup and procedures
- Breeding techniques
- Laboratory setup
- Fine-tuning / fixing programs that are not working
- Mentoring & personalized instruction

Think,

Please breed responsibly. Embryo transfer is an advanced reproductive tool not applicable in all situations and is not a replacement for mares to carry their own foal.

Some appropriate situations for the use of embryo transfer:

- Late foaling mares, the only other option is to miss a year
- Mares that conceive readily but are no longer capable of carrying their pregnancy to term
- Badly lame / crippled mares
- Older reproductively sound broodmares to potentially extend their producing future
- Winning show mares. For obvious reasons
- Determining the best cross for your mare or young stallions in the minimum amount of time.
